

## 1. Application

DQS□-1.6~32-Y/X (replaced original model:DQS-76/152、UDZ) type electrode water level gauge is mainly used in monitoring the water level of various drums and measurement on high and low voltage heaters, generators, evaporators and water tanks etc., and it has the function of output of warning node.

The instruments adopts the customary marks of heat engineering, that is the double-color beam combined by red steam and green water and the LED, which makes it possible to view the positions of the steam and water.

### 1. 用 途

DQS□-1.6~32-Y/X (原型号为 DQS-76/152、UDZ) 型电接点水位计, 主要用于各种汽包液位的监视及高、低压加热器、除氧器、蒸发器及水箱等的水位测量, 并具有报警节点输出等功能。

本装置采用热工习惯用的标志, 即汽红、水绿的双色合成光柱及数码显示, 直观地显示汽、水位置。
